EDUCATION

B.Sc in Computer Science, University of Toronto

Sept 2018 - Jun 2023

EXPERIENCE

Software Developer

Citigroup

Jul 2023 - Present

Mississauga, ON

- Developed automated email subscription service on a video sharing platform using **Java** and **Kafka**.
- Coded UI and microservices for globally-utilized data and analytics apps using **Angular, Javascript, Java, and Spring**.
- Oversaw end-to-end development process in an **agile development environment**, from coding to testing and deployment using **CI/CD tools**.
- Collaborated across **engineering and product teams** to support in-app translations for international clients.
- Worked closely with business analysts and UX designers to **develop POCs for improving app efficiency**.
- Increased test coverage using **JEST, Jasmine** and **SonarQube**, significantly improving code reliability.

Software Developer Intern

Winterlight Labs

May 2021 - Aug 2022

Toronto, ON

- Developed features to collect and analyze sound clip data for speech-pathology research using **React, Redux, and Node.js**.
- Engineered data visualization tools **assessing product KPIs** and **employee performance** using **SQL and Javascript**.
- Enhanced a **RESTful API** to introduce administrative capabilities and streamline operations.
- Automated cloud storage of monthly financial statements on **AWS S3** using **Node.js and Express**.
- Utilized **Figma** to **design app enhancements** in collaboration with product team and tech leads.

Web Developer Intern

Special Olympics Ontario

Aug 2020 - Feb 2021

Toronto, ON

- Implemented UI features using **Vue, Javascript, and Node.js** to help health practitioners connect with disabled patients.
- Directed a comprehensive website overhaul with a focus on **CSS and HTML** enhancements, significantly improving tablet and mobile compatibility.
- Conducted rigorous testing to prioritize **accessibility-first design principles and optimize website performance**.
- Collaborated with product owners to **create interactive wireframes** outlining website features and functionality.

PROJECTS

3D Unity Game. Led a team of 15 programmers, musicians and artists to develop a 3D action game in **Unity**/ [\(Demo\)](#).

C++ Game. A top-down 2D shooting game developed in **C++** with randomly generated levels. [\(Demo\)](#)[\(Code\)](#)

MERN Marketplace Site. Developed a full-stack site where users can make postings for animal adoptions using **MongoDB, Express, React, and Node.js**). [\(Code\)](#)

Java Portfolio App. Collaborated with a team to develop a **Java, Springboot and Angular** app that seamlessly integrates with **real-time API data** sources, allowing users to buy, sell, and visualize their holdings.
